

Tension Rings

Expert guidelines:

Safety at work is one of the Häfner's company's policies!
 »As well as being required by law, the safe design of machines, equipment and workplaces is a specific aim of the company's management.

Safe, hazard-free working with excellent results is the only way to achieve the optimum operational sequences. We use high quality economical products to ensure perfect production for you.«

HÄFNER

Tension Rings

Use:

Tension rings serve to protect the wire during transit of the winding drums. The tension ring pushes down on the wound wire, which prevents the upper layers of wire from slipping. When rewinding, the tension ring is controlling the wire out of the container and prevents the formation and build up of loops.

Material:

PP TSG = Polypropylene with foam structure

PS = high impact polystyrene

Further information is given in our material specification.

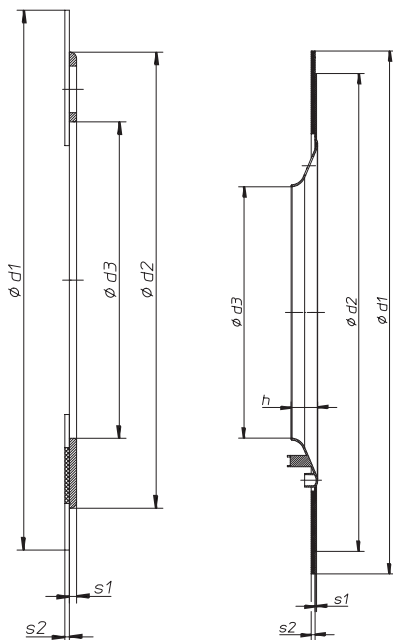

Packaging:

Information on request.

Tolerance:

All measures, weights and loads as indicated in this brochure are approximate figures.

Tolerances and deviations as customary in this trade reserved.

► Tension Rings

Dimensions in mm, all dimensions are nominal dimensions.
